

Tropical Storm CINDY QuickLook Posted: 14:00 CDT 06/20/2017

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 06/20/2017 14:00 CDT, water levels along the central Gulf of Mexico coast are elevated and range between 0.7 to 2.35 ft above normal tide levels. The highest water level residuals are at Bay Waveland, MS and Shell Beach, LA where water levels are slightly over 2.0 ft above tide predictions. Wind and barometric pressure remain steady along the Gulf Coast, and range between 10-20 knots and 1009-1015 mb respectively.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

SELECT NATIONAL HURRICANE CENTER ADVISORY INFORMATION:

Tropical Storm Cindy Intermediate Advisory Number 4A
NWS National Hurricane Center Miami FL
100 PM CDT Tue Jun 20 2017

...DISTURBANCE BECOMES TROPICAL STORM CINDY...
...HEAVY RAINFALL SPREADING ACROSS MUCH OF THE CENTRAL GULF COAST...

WATCHES AND WARNINGS

CHANGES WITH THIS ADVISORY:

None.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...
* High Island to the Mouth of the Pearl River

A Tropical Storm Watch is in effect for...
* West of High Island to San Luis Pass

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area, in this case within the next 24 to 36 hours.

A Tropical Storm Watch means that tropical storm conditions are possible within the watch area, generally within 48 hours.

Interests elsewhere along the U.S. Gulf Coast from the central Texas coast to the western Florida Panhandle should monitor the progress of this system.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

Satellite imagery, aircraft data, and surface observations indicate that the low pressure system in the central Gulf of Mexico has acquired a well-defined center, and is now Tropical Storm Cindy, the third tropical storm of 2017.

At 100 PM CDT, the center of Tropical Storm Cindy was centered about 265 MI S of Morgan City, Louisiana. Cindy has been stationary for the past few hours, but the system is expected to resume a motion toward the northwest at around 10 mph later today, and this motion is expected to continue through Wednesday night. A turn toward the north-northwest is forecast early Thursday. On the forecast track, Cindy is expected to approach the coast of southwest Louisiana late Wednesday or Wednesday night, and move inland over western Louisiana and eastern Texas on Thursday.

Maximum sustained winds are near 45 mph with higher gusts. Little change in strength is forecast before the system reaches the coast on Thursday.

Tropical-storm-force winds extend outward up to 205 miles, mainly to the north and east of the center.

The estimated minimum central pressure is 999 mb.

HAZARDS AFFECTING LAND

WIND: Tropical storm conditions are expected to first reach the coast within the warning area later today and spread westward within the warning area through Wednesday. Tropical storm conditions are possible in the watch area on Wednesday.

RAINFALL: Cindy is expected to produce total rain accumulations of 6 to 9 inches with isolated maximum amounts of 12 inches over southeastern Louisiana, southern Mississippi, southern Alabama, and the Florida Panhandle through Thursday. Rainfall amounts of 3 to 5 inches with isolated maximum amounts of 6 inches can be expected farther west across southwest Louisiana into southeast Texas through Thursday.

STORM SURGE: Inundation of 1 to 3 feet above ground level is possible along the coast in portions of the Tropical Storm Warning area.

TORNADOES: A tornado or two is possible this afternoon and tonight from south-central Louisiana to the western Florida Panhandle.

NEXT ADVISORY

Next complete advisory at 400 PM CDT.

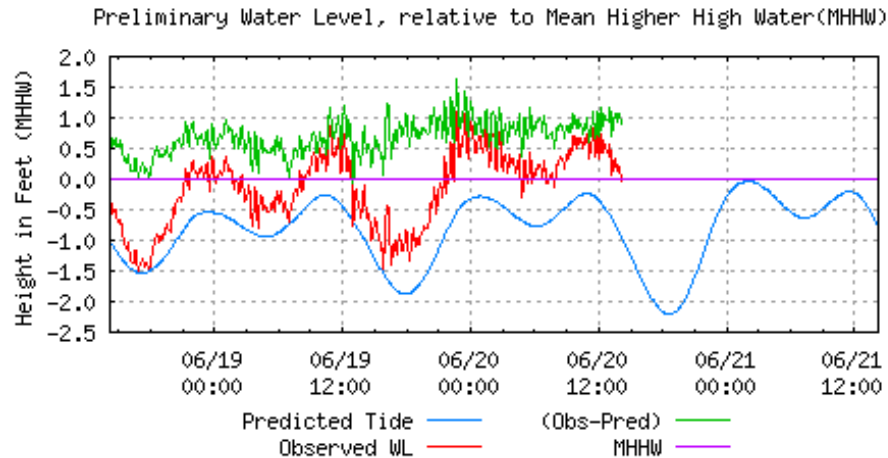

Forecaster Brennan

For the purpose of timely release, data contained within this QuickLook have undergone a "limited" NOS Quality Assurance/Control; however, the data have not yet undergone final verification. All data subject to NOS verification.
